

SHEEP SPRAY JET

KEY FEATURES:

- ✓ Lightweight stainless steel design allows for ease of movement.
- ✓ Automatic jet for a more efficient and timely operation.
- ✓ 22 Nozzles to ensure complete saturation.
- ✓ Adjustable sides for different sized and/or aged flocks.
- ✓ Electric sensor activation for a clutter free flow of animals.
- ✓ Battery operated for use in any remote location.
- ✓ Non-slip fiberglass floor.

Our Sheep Spray Jet, crafted from 304 stainless steel, features adjustable sides suitable for various animal sizes and ages. Equipped with 22 nozzles for thorough saturation, it operates via an electric sensor triggered by animal movement.

Brass solenoid valves, connected to each spray line through a central control box, activate upon detection and de-activate once the animal moves away from the sensor beam. For optimal wetting, maintain sheep flow at less than 1 animal per second.

- Sheep should turn a corner before reaching the Spray Jet for separation.
- The lead up race should have solid sides.
- No clutter in the Spray Jet.
- The exit Race should encourage sheep to run through the Spray Jet.

RECOMMENDED PUMP

Honda Davey
Firefighter Pump
Twin Impeller
6.5HP
